INDUSTRY - CONSTRUCTION SITE LOGISTICS & STORAGE

CONSTRUCTION SITE LOGISTICS & WAREHOUSING

What We Bring to the Table

- 260,000 Sq. Ft Warehousing & Distribution Center
- In-House Fleet for Final Mile Pickup & Delivery
- Professional Warehouse & Project Management Staff to Oversee Your Project
- Technology Driven Inventory Management
- Infrastructure (Racks, Forklifts, Staff) Provided

Our Philosophy

Each project is unique with very specific goals and measures; you can expect the exact same from our approach. Whether your project is large or small, new or refreshed, MyPorter has a service or solution for you. We execute projects with quality and integrity – on time and on budget.

CORE OFFERINGS:

Sequenced Site Delivery and Pickup
In any construction, renovation, or installation project there are a complex series of raw materials, FF&E, and products which must arrive at the site in a specific sequence to ensure maximum productivity. MyPorter can work with outside vendors to receive large volumes of freight, parse goods, and bring to site in a specific sequence.

Off-Site Storage for Safety and Security
High-end raw materials and products are not secure when left out on a job site. If it's not installed, it should be safely stored off-site at a MyPorter facility. In addition, every contractor knows that a less cluttered site is a safer site. Only keep goods on hand when they're being used.

Sub-Contractor Materials Consolidation & Visibility
Sub-contractors are responsible for a large number of initiatives on any construction project. Typically, responsibility for sourcing materials and their secure storage is also the responsibility of the sub. Consolidate your subcontractors' materials in a single location as a value-add to them as well as maintaining high visibility to the entire project's goods.

Flexible Terms and Speed to Contract
At MyPorter, we believe in flexibility. Month to month or fixed contracts, we can come up with a temporary or long-term program to help you complete your fulfillment and distribution projects.

CASE IN POINT

National HVAC Contractor Use MyPorter for Parts and Raw Materials Storage and Distribution

The Challenge

A national HVAC contractor purchased a large quantity of finished product (condensers) and raw materials (copper) from China in advance of a large multi-family development project. He need the items categorized by SKU, storage for six months, and a phased delivery scheduled to their customer's site as the items and materials were needed.

How we Helped

To proactively address these issues, MyPorter invited the client on-site to discuss the cadence and details. Working with the CEO of the HVAC contractor (our client) MyPorter delivered a flexible solution that accurately measured month storage pricing based on reduction in inventory levels and a flat, easily understood fee for delivery. A simple pricing structure was created for storage, handling services for inbound / outbound, exception management (e.g., pallet re-stacking, shrink wrapping), and full suite of technology visibility and reporting services using the MyPorter technology stack.

Results

The project went extremely smoothly with the construction site getting the correct parts and raw materials at precisely the right time, resulting in a well-run operation and secure storage for highly valuable inventory and no leakage. The client is gearing up to use MyPorter on another project in the Atlanta area.

"Without MyPorter managing the local logistics on the ground, we wouldn't have been able to get this done" - CEO, National HVAC Contractor
